Pairs

You will be given an array of integers and a target value. Determine the number of pairs of array elements that have a difference equal to a target value.

For example, given an array of [1, 2, 3, 4] and a target value of 1, we have three values meeting the condition: 2 - 1 = 1, 3 - 2 = 1, and 4 - 3 = 1.

Function Description

Complete the *pairs* function below. It must return an integer representing the number of element pairs having the required difference.

pairs has the following parameter(s):

- k: an integer, the target difference
- arr: an array of integers

Input Format

The first line contains two space-separated integers n and k, the size of arr and the target value. The second line contains n space-separated integers of the array arr.

Constraints

- $2 \le n \le 10^5$
- $0 < k < 10^9$
- $0 < arr[i] < 2^{31} 1$
- ullet each integer arr[i] will be unique

Output Format

An integer representing the number of pairs of integers whose difference is k.

Sample Input

5 2 1 5 3 4 2

Sample Output

3

Explanation

There are 3 pairs of integers in the set with a difference of 2: [5,3], [4,2] and [3,1].
